

Setup

- 1) Connect to the wifi (on your laptop and devices)
 - Network name:
 - Password:
- 2) Go to platform.telerik.com and login
- 3) Make sure you have the NativeScript app installed on your Android and/or iOS device(s)

NativeScript Deep Dive

- TJ VanToll | @tjvantoll
- Clark Sell | @csell5
- Sebastian Witalec | @sebawita

Agenda

- NativeScript intro (TJ)
 - Lab #1
- Data, styling, layouts, and more (Clark)
 - Lab #2
- MVVM, modules, extensibility (Sebastian)
 - Lab #3

Follow NativeScript

- nativescript.org
- [@nativescript](https://twitter.com/nativescript)
- nativescript.org/blog

What is NativeScript?

- A runtime for building and running *native* iOS, Android, and Windows Phone apps with a single, JavaScript code base

Why NativeScript?

- Skills reuse
 - Standards-based JavaScript, CSS, optionally TypeScript
- Code reuse
 - npm modules, 3rd-party iOS and Android libraries
- Easily use native APIs
 - No wrappers to access native APIs
 - Use native UI elements
- Open source!

Contribute!

(nativescript.org/contribute)

Contributing to NativeScript

Thank you for your interest in contributing to the NativeScript project!

Anyone wishing to contribute to the NativeScript project MUST read & sign the NativeScript [Contribution License Agreement](#). The NativeScript team cannot accept pull requests from users who have not signed the CLA first.

NativeScript is a complex framework, involving cross-platform modules, a Command-Line Interface and platform-specific runtimes. Each of these follows a specific technology, therefore the contribution instructions are different for each.

Please, visit these repositories for detailed contribution guidelines:

[Cross-Platform modules](#)

[Command-Line Interface](#)

[Android-Runtime](#)

[iOS-Runtime](#)

!=

- No DOM

!=

- Direct access to native APIs in JS

!=

- No cross compilation

NativeScript Android example

```
var time = new android.text.format.Time();  
time.set( 1, 0, 2015 );  
console.log( time.format( "%D" ) );
```

Output: "01/01/15"

NativeScript iOS example

```
var alert = new UIAlertView();  
alert.message = "Hello world!";  
alert.addWithTitle( "OK" );  
alert.show();
```

UIAlertView Class Reference

- GKTapper
- MVCNetworking
- SquareCam
- URLCache

Feedback

```
var alert = new UIAlertView();
alert.message = "Hello world!";
alert.addButtonWithTitle( "OK" );
alert.show();
```

How does this work?

NativeScript and JS VMs

- NativeScript runs JavaScript on a JavaScript VM
 - JavaScriptCore on iOS
 - V8 on Android
 - JavaScriptCore on Windows (subject to change)

```
var time = new android.text.format.Time();  
time.set( 1, 0, 2015 );  
console.log( time.format( "%D" ) );
```

- Runs on V8

```
var alert = new UIAlertView();  
alert.message = "Hello world!";  
alert.addButtonWithTitle( "OK" );  
alert.show();
```

- Runs on JavaScriptCore

**So do you only write native
code?**

No

NativeScript modules

- NativeScript-provided modules that provide cross-platform functionality.
- There are dozens of them and they're easy to write yourself.
- NativeScript modules follow Node module's conventions (CommonJS).

NativeScript file module

```
var fileSystemModule = require( "file-system" );  
new fileSystemModule.File( path );
```

`new java.io.File(path);`

`NSFileManager defaultManager();`
`fileManager.createFileAtPathContentsAttributes(path);`

HTTP module example

```
var http = require( "http" );  
http.getJSON( "https://api.myservice.com" )  
  .then(function( result ) {  
    // result is JSON Object  
  });
```

Custom NativeScript modules

```
// device.ios.js
module.exports = {
    version: UIDevice.currentDevice().systemVersion
}
```

```
// device.android.js
module.exports = {
    version: android.os.Build.VERSION.RELEASE
}
```

Using the custom device module

```
var device = require( "./device" );  
console.log( device.version );
```

But how do I turn this into an app?

Two ways to use NativeScript

1)  **Telerik**PlatformSM

2) `npm install -g nativescript`

Telerik PlatformSM

<http://telerik.com/platform>

- Backend-as-a-service
 - Push notifications, cloud data, file storage, and more
- Analytics
- AppBuilder
 - Cloud builds (build iOS apps on Windows, Windows Phone apps on a Mac)
 - NativeScript debugging and tooling
- Automated app testing
- And more!

Try everything Telerik Platform
has to offer, FREE, for 30 days

 **All Platform Services**

 **Web, Hybrid & Native UI**

Unlimited trial support

Telerik Platform Developer

\$39 /month/user
requires annual upfront payment

Subscribe

Ideal for tinkerers and hobbyists just
getting started with mobile app
development

 **Core Platform**

 **Hybrid UI**

Limited web support

Telerik Platform Professional

\$79 /month/user
requires annual upfront payment

Subscribe

For professional developers and small
teams building full-featured employee and
consumer apps

 **Core Platform**

+ Advanced Cloud Services
+ Direct App Store Deployment

 **Hybrid & Native UI**

Limited web support

**MOST
POPULAR**

Telerik Platform Business

\$149 /month/user
requires annual upfront payment

Subscribe

For developers and large teams
building advanced apps
connected to business data

 **Pro Platform**

+ Active Directory Integration
+ Enterprise Data Connectors
+ Private App Distribution

 **Web, Hybrid & Native UI**

Unlimited web support

Telerik AppBuilder IDE Options

- In-Browser Client
- Visual Studio Extension
- Sublime Text Package
- Command-Line Interface

NativeScript CLI

- Free and open source
- <https://github.com/nativescript/nativescript-cli>

NativeScript CLI requirements

- <https://github.com/nativescript/nativescript-cli#system-requirements>

- JDK, Apache Ant, Android SDK

- Xcode, Xcode CLI tools, iOS SDK
